

AMSCO® Orthopedic Extension

BF806

The Orthopedic Extension is an alternative to dedicated orthopedic fracture tables. This table accessory serves as an ideal solution when current case load may not warrant a dedicated table, when budget restraints are a concern or when considering a supplemental or secondary fracture table. This accessory serves the full range of traditional orthopedic procedures. The radiolucent carbon fiber abductor bars provide unobstructed imaging capabilities and versatile positioning of the patient's lower extremities. The mobile stainless steel accessory cart provides ample storage space for the accessories and also functions as a convenient platform for docking, undocking and storing the abductor bars.

Maximum patient weight : 181 kg (400 lbs)

Not CE marked product

To be used only with US side rails
