

## **4K Ready Light Handle Camera Module**

LAH00264K

The 4K and HD Camera modules use a high resolution, fullfeatured video camera. The camera complies with relevant safety standards for use in medical or surgical contexts. The camera's small size allows it to reside in the lighthead, providing an unobstructed view of the surgical site. The control center provides a powerful and convenient means of controlling the built-in camera features, including zoom, focus and brightness. The video signal originates from the camera at the ceiling plate. The system utilizes OM4 fiber optics that can be transmitted or converted as required for Customer visualization needs.

## **COMPATIBLE WITH**

HARMONYAIR® A-SERIES
